

Chapter 32 — Piel–Pual Contrast Drill

BBH Chapter 32 · Pual Strong Verbs

Part A: active/passive pairs from the same root — identify stem and translate. Part B: 15 mixed forms (Piel / Pual / Hiphil / Hophal) — identify stem, conjugation, PGN, and root. Answer key is on the last page.

Piel diagnostic: Hireq / tseré under prefix + Dagesh Forte in R2. Pual diagnostic: Qibbuts under R1 + Dagesh Forte in R2 (■ rejects dagesh → compensatory lengthening to qamets: ■■■■■■■■■■). Hophal: qibbuts under prefix consonant OR shureq for l-yod/Biconsonantal. Hiphil: Hireq under ■■ (perfect); patach under prefix (yiqtol/wayyiqtol).

Reflection Questions

1. The Pual diagnostic is "qibbuts under R1 + dagesh in R2." Item 6 (בְּבָרַךְ) has qamets, not qibbuts, under ב. What phonological rule explains this? Compare item 20 (מְבָרַךְ) where the aleph also rejects dagesh.
2. Items 13 (Hophal בְּבָרַךְ) and 8 (Pual בְּבָרַךְ) both start with qibbuts. How do you distinguish a Hophal from a Pual when both use qibbuts?
3. Item 4: בְּבָרַךְ is Hiphil, not Piel, even though both are active. What features identify it as Hiphil rather than Piel?
