

Reflection Questions

1. Items 1, 4 (Hiphil ג.ל.ד) vs. 7, 19 (Hophal): In the Hiphil, a person tells; in the Hophal, information is told. What does this show about how Hebrew distributes agency in speech-reporting?
2. Items 10, 11, 22 are all Hiphil of ש.ל.ך (strong root). Without looking at context, what morphological feature marks each one's conjugation and PGN?
3. Items 9 (Gen 26:11) and 21 (Exo 19:12) use the identical Hophal Imperfect יִמָּחֵק in both a royal decree and divine law. What does the passive voice add that an active "I will kill" cannot?

Answer Key

#	Form	Ref	Root	Stem	Conjugation	PGN	Translation
1	הִגִּיד						
✓	הִגִּיד	Gen	גָּדַד	Hiphil	Perfect	3ms	he told you
