

Chapter 32 — Piel–Pual Contrast Drill

BBH Chapter 32 · Pual Strong Verbs

Part A: active/passive pairs from the same root — identify stem and translate. Part B: 15 mixed forms (Piel / Pual / Hiphil / Hophal) — identify stem, conjugation, PGN, and root. Answer key is on the last page.

Piel diagnostic: Hireq / tsere under prefix + Dagesh Forte in R2. Pual diagnostic: Qibbuts under R1 + Dagesh Forte in R2 (ר rejects dagesh → compensatory lengthening to qamets: מַ, רַ, בַּ, מַ). Hophal: qibbuts under prefix consonant OR shureq for l-yod/Biconsonantal. Hiphil: Hireq under הַ (perfect); patach under prefix (yiqtol/wayyiqtol).

Part A — Active / Passive Pairs

#	Root	Form A	Stem A	Form B	Stem B	Translation A / B
1		תְּבַרֵךְ (2)	מְבַרֵךְ (.)

Reflection Questions

1. The Pual diagnostic is "qibbuts under R1 + dagesh in R2." Item 6 (מְבַרֵךְ) has qamets, not qibbuts, under ר. What phonological rule explains this? Compare item 20 (רָאָה) where the aleph also rejects dagesh.
2. Items 13 (Hophal דִּגְלוּ) and 8 (Pual דִּגְלוּ) both start with qibbuts. How do you distinguish a Hophal from a Pual when both use qibbuts?
3. Item 4: דִּלְדַּל is Hiphil, not Piel, even though both are active. What features identify it as Hiphil rather than Piel?
