

Chapter 33 — Qal–Piel–Pual Contrast Drill (Weak Roots)

BBH Chapter 33 · Pual Weak Verbs

Each triplet shows the same weak root in Qal, Piel, and Pual (Perfect 3ms). For each form: (1) identify the stem, (2) parse fully, (3) translate. Watch for III-he endings and guttural compensatory lengthening. Answer key is on the last page.

III-he Pual Perfect 3ms: qibbuts under R1 + dagesh in R2 + final qamets-heh. R2=r rejects dagesh: qibbuts lengthens to holem (borakh not burakk). I-guttural R1: guttural takes qibbuts (Pual) or hiriq (Piel) but does not change the stem vowel identity.

Reflection Questions

1. Compare Triplet 1 (glh, III-he) and Triplet 3 (brk, R2=r). Both are "weak" but in different ways. Describe the weak-root change in each and how it affects the Pual form specifically.
2. Triplets 1, 2, 4, 5 all end in qamets-heh in the Pual Perfect 3ms. What marks the difference between the Piel and Pual in these III-he forms when R1 is not distinctive? (Hint: look at both R1 vowel and R2 dagesh.)
3. Root anh (triplet 4) is both III-he and I-guttural. Did the I-guttural status change anything about the Pual form? Why or why not?
