

Chapter 27 — Hiphil Weak-Form Identification Drill

BBH Chapter 27 · Hiphil Weak Verbs

Part A (1–40): forms are grouped by weak class (5 per class). Identify conjugation + PGN, and give the root. Part B (41–50): mixed classes — identify the class first, then parse. Answer key is on the last page.

Classes: I-guttural (he prefix seghol; composite shewa under R1) | III-ch/ayin (patach furtive before final guttural) | III-aleph (silent final aleph; chiriq-yod or tsere before it) | III-he (qamets+he perfect; seghol+he impf/ptc; apocopated wayyiqtol; vot inf.cstr) | I-nun (dagesh forte in R2 throughout) | I-yod (ho/yo/mo prefix pattern) | Biconsonantal (he+tsere perfect; qamets impf/wayyiqtol; ha+qamets imv/inf; me+tsere ptc) | Geminate (same prefixes as Biconsonantal! R2=R3 is the only distinguishing feature; requires root knowledge)

Reflection Questions

1. Compare ■■■■■■■■ (III-aleph perfect 3ms) and ■■■■■■■■ (III-aleph imperative 2ms). Both end with silent final aleph. How do you distinguish them? What is the key difference in the prefix vowel?
2. ■■■■■■■■ (III-ch/ayin imperative) and ■■■■■■■■ (I-guttural imperative) both begin with the ha- prefix. How does the vowel under R1 differ? What does that tell you about the class?
3. ■■■■■■■■■■ (III-ch/ayin wayyiqtol) and ■■■■■■■■■■ (III-aleph wayyiqtol) both have patach under the wayyiqtol prefix. The difference is in the final vowel. Explain what happens to the Hiphil tsere in each case and why.
4. Compare ■■■■■■ (I-yod imperative 2ms) and ■■■■■■ (Biconsonantal imperative 2ms). Both have a long prefix vowel rather than the patach of the strong Hiphil imperative. What prefix vowel does each use, and how can you tell them apart?
5. Items 36-40 (Geminate) and items 31-35 (Biconsonantal) share nearly identical vowel patterns in every conjugation: he+tsere perfect, qamets imperfect/wayyiqtol, ha+qamets imperative, me+tsere participle. What is the only reliable way to determine whether a Hiphil form belongs to the Geminate class or the Biconsonantal class? Why can the vocalization alone not always resolve this question?
